Dead Sea Draws Visitors As World's Lowest Spot

The mysterious Dead Sea, lowest body of water in the world, is slowly coming to life again under the impact of travel.

Located in Southern Jordan, one of the Bible Lands the Dead Sea has shrunk from pre-historic times to its present size of 47 miles by 10 miles. Its surface is 1,300 feet below the Mediterranean and its waters are fed from a single source, the River Jordan. The water flowing in has no outlet so evaporation carries it off in eerie, blue-white clouds that linger over the landscape.

tion carries it off in eerie, blue-white clouds that linger over the landscape.

Before tourists sampled the briny sea, there was no life about except for gulls plucking dead fish lying on the surface. Even fish, entering from the River Jordan, could not live in the high salt content of the sea. This content, between 23 and 25 per cent, is four times as high as other seas.

The only signs of life are dead fossils from a pre-historic age when the sea was much larger in area and actually topped the Mediterranean in height. But, in the memory of man, no life has stirred there. Greek writers started calling it, "The Dead Sea," but the Arabs were more graphic, calling the eerie place the "Stirking Sea" or "Sea of Overwhelming."

But now there are searches underway probing the thousandfoot-depth minerals. And each year brings larger flocks of tourists to picnic on its shores and to wade into the water, the salt content of which buoys up swimmers so their shoulders are constantly above water. When they leave the Dead Sea stays with them as considerable effort is necessary to scrub off the brine.
